# AVAYA

Setting Time Zone on Avaya Vantage Phones

BRIEFING

The Avaya Vantage telephone does not require the operator to set the time since the phone polls the Internet continually (using SNTP) to determine to correct time.

However, the telephone is not able to automatically determine what time zone you are currently in, so this must be configured by the user on the phone.

LAUNCH

- Once the phone has been connected and has booted up, go to **Settings**.
- Scroll down to find **System**, then tap **Date & Time**.
- Tap **Select Time Zone**.
- From the list of options, scroll to find your time zone and tap it to select.

And you are done.
